Paragrah tag

Tables in HTML (This title is bold because we used 'strong' tags to wrap it)

Different rows in a table are defined using tr tag and different cells are defined using tags th (for header cell) or td cell (for a daughter cell i.e, which stores the data). Also used border prop to set the border width of the table.

I also used inline styling to remove the margin between the cells.

Used embedded css (see head) to align text in center in the cells and to do other things.

Enrollment Number	Name	contact
1917CUKmr17	Irfan Mehraj Wani	123456789
1917CUKmr16	Inbisat Yousuf	213465879
1917CUKmr33	Shahid Zaffer	1234432112
1917CUKmr22	Mohammad Imran Bhat	3434345667
1917CUKmr38	Waqar Ahmad	2178905643

Rendering an image below. Also using alt prop (text which is shown if image fails to render) and some in-line styling.

some examples of Hyperlinks(text which acts as a link and can take to the url specified when clicked)

Google Github Stackoverflow

Unordered list example with type circle (other options are; square, disc(default)):

- First item
- second item
- third item

Ordered list example:

1. First ordered item
2. second ordered item
3. third ordered item
